

On-Band...The Cost-Effective IP VSat Solution

Global Coverage

Coverage 2005/6

On-Demand IP Broadband • iDirect Platform • By-The-ByteSM Pricing/Global Roaming
• Instant Access/No Advance Scheduling •

How On-Band Works

Service Provision:

On-Band provides and operates the hubs, satellite coverage, network management, billing and back-office infrastructure (through proprietary encrypted software).

Service Features:

2 MBPS outbound/1MBPS inbound

Roaming capability

- between satellites and regions
- no roaming premium
- no advance scheduling

Low monthly fee (includes 40MB of data) with per KByte billing thereafter

Multiple regional NOC's
Carrier-grade Teleports
Redundant Tier 1 Internet peering

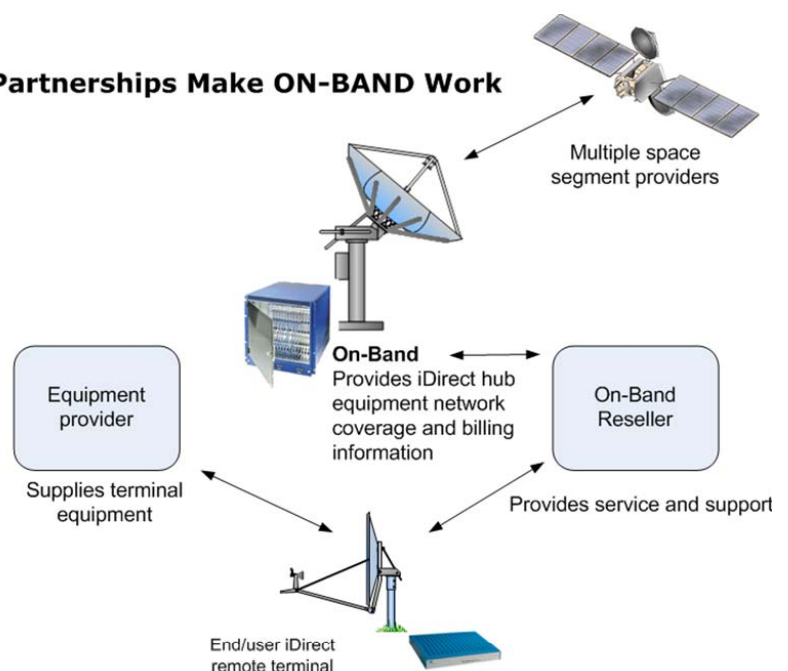

Customer cost management available through real-time web-based usage measurement

Customer Service:

Service Providers/Resellers deliver the service to end users. Resellers may also furnish remote terminals.

The Reseller is the single point of contact for the customer.

Partnerships Make ON-BAND Work
